

Quantity Limits

FOR PRESCRIPTION DRUGS

For some prescription medications, there is a specified maximum quantity you can receive per prescription. Amounts over the specified quantity limits are not a covered benefit.

Quantity Limit Information

Wellmark typically covers a 30-day supply for prescriptions; however some drugs have a quantity limit. Amounts over the specified quantity limits are not a covered benefit.

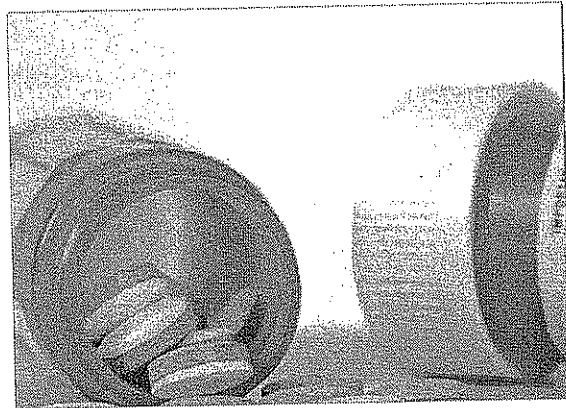

Quantity limits are designed to identify the excessive use of drugs which may be dangerous in large quantities and to highlight the potential need for a different type of treatment. Most people would not need to take these drugs more often than what Wellmark allows.

No special steps are necessary by the physician or member to have these drugs covered as long as the medications prescribed do not exceed the quantity limit. A few drugs may also require prior authorization (for example, Viagra).

If you require one of these drugs in a larger quantity than is allowed, your physician may make a special request for coverage. Your physician may be asked to provide details about your medical condition and treatment plan. After reviewing the information, coverage will be evaluated based on medical necessity.

Your coverage manual has specific information about your plan's prior authorization requirements.

View the most current quantity limit listing at www.wellmark.com. Additional drugs may be added to this list throughout the year.
